

ACH 101

First ACH Plug-in Designed for QuickBooks®

Benefits:

- Save time! No more double data entry to process transactions and then enter into QuickBooks. Transactions are automatically applied and posted into QuickBooks.
- Free technical support! We provide personal installation instruction, one-on-one training on how to use the system, and technical support if you need it.

What is it?

First ACH has teamed with Comstar Interactive® to offer the First ACH Plug-in Designed for QuickBooks®. We've certified our systems with their secure PCI compliant ComsGate™ gateway platform for a fully integrated, comprehensive, and feature rich payments gateway solution.

Our Plug-in allows you to process ACH and credit card transactions directly through your QuickBooks interface. Whichever payment method you prefer, you can automatically apply those payments to open invoices and stamp them as paid without ever leaving QuickBooks! It's totally automated!

Requirements:

QuickBooks must be purchased separately and is not available from First ACH. The plug-in is designed to work with QuickBooks Pro, Premier, and Enterprise Editions for 2005, 2006, 2007 and 2008. ACH processing requires a First ACH account. Credit Card processing requires a separate First ACH account.

How does it work?

When you purchase the First ACH Plug-in designed for QuickBooks®, you will be provided a downloadable plug-in that will add functions directly to your QuickBooks system. A representative will contact you to assist you with the download and provide one-on-one training so you will know exactly how to use the system. Then, anytime you are working with your invoices in QuickBooks, you will be able to enter your customers' account information, submit the payment transaction, and stamp your invoice paid in a single process right from QuickBooks. It's that simple.

Features:

- Eliminate time-consuming data entry by processing payments directly from invoices
- Process sales receipts (using 2006, 2007)
- Process multiple invoices
- Process recurring payments
- Void transactions
- Use flexible and scalable solutions with single user and enterprise applications

Credit Card Features:

- Visa Payment Application Best Practices (PABP) validated
- Utilizes the ComsGate™ PCI DSS level I compliant payment gateway
- Real-time transaction details and database management via the web based Transaction Manager
- Rapid processing times with immediate approval and decline code notification - including voids and returns
- Automatic batching through our host based platforms
- Import transactions processed via POS terminals, including Smartphones, PDA's, Pocket PC's & POS terminals
- Supports Bluetooth and USB enabled magstripe card readers and printers for reduced card swipe rates
- Seamlessly import business data from e-commerce, wireless, and IP terminals
